	Examiner James C Yeung	Art Unit 3749	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Palmer in view of Fleischmann and Janu.

Palmer discloses the invention substantially as claimed. However, Palmer does not disclose that the water heating system comprising an elongated duct and more than one fan units.

Fleishmann teaches the use of an elongated duct for the purpose of receiving warm attic air from location remote from an air exhaust outlet (70, Fig. 2A) of a heat exchanger system (18, Fig. 2A).

Elkins teaches the use of a plurality of fan units (note elements 51-53, Fig. 5) for the purpose of enhancing the flow of exhaust air through a heating/cooling system.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the inlet sleeves of the water heating system of Palmer with an elongated duct such as taught by Fleischmann in order to receive warm attic air from location remote from the exhaust air outlet. Furthermore, it would have been obvious to one having

ordinary skill in the art at the time the invention was made to provide the water heating system of Fleischmann with a plurality of fans in the manner as taught by Elkins in order to enhance the flow of exhaust air through the water heating system.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Moratalla is cited to show an attic air conditioning system.

Emon is cited to show an attic water heating system installed in the area beneath the roof of a building structure.

Janu is cited to show in Figs. 2-3 a HVAC system comprising a plurality of exhaust fans.
